

Transportation in Santa Fe:

What we know
and
How we know it

Crashes

Safety is the MPO's number one priority in every conversation

NMDOT PM 1 (Safety) 2024 Targets

Figure 2 Total Serious Injuries

NMDOT 2024 Target for Serious Injuries: 1,018.6

Santa Fe adopted state “targets” again this year in our performance measurements.

- Trends are Fatalities increasing both in number and rate
 - over-represented by vulnerable users.
- serious injuries are decreasing.
- Increase in vulnerable road-user deaths.

Crashes

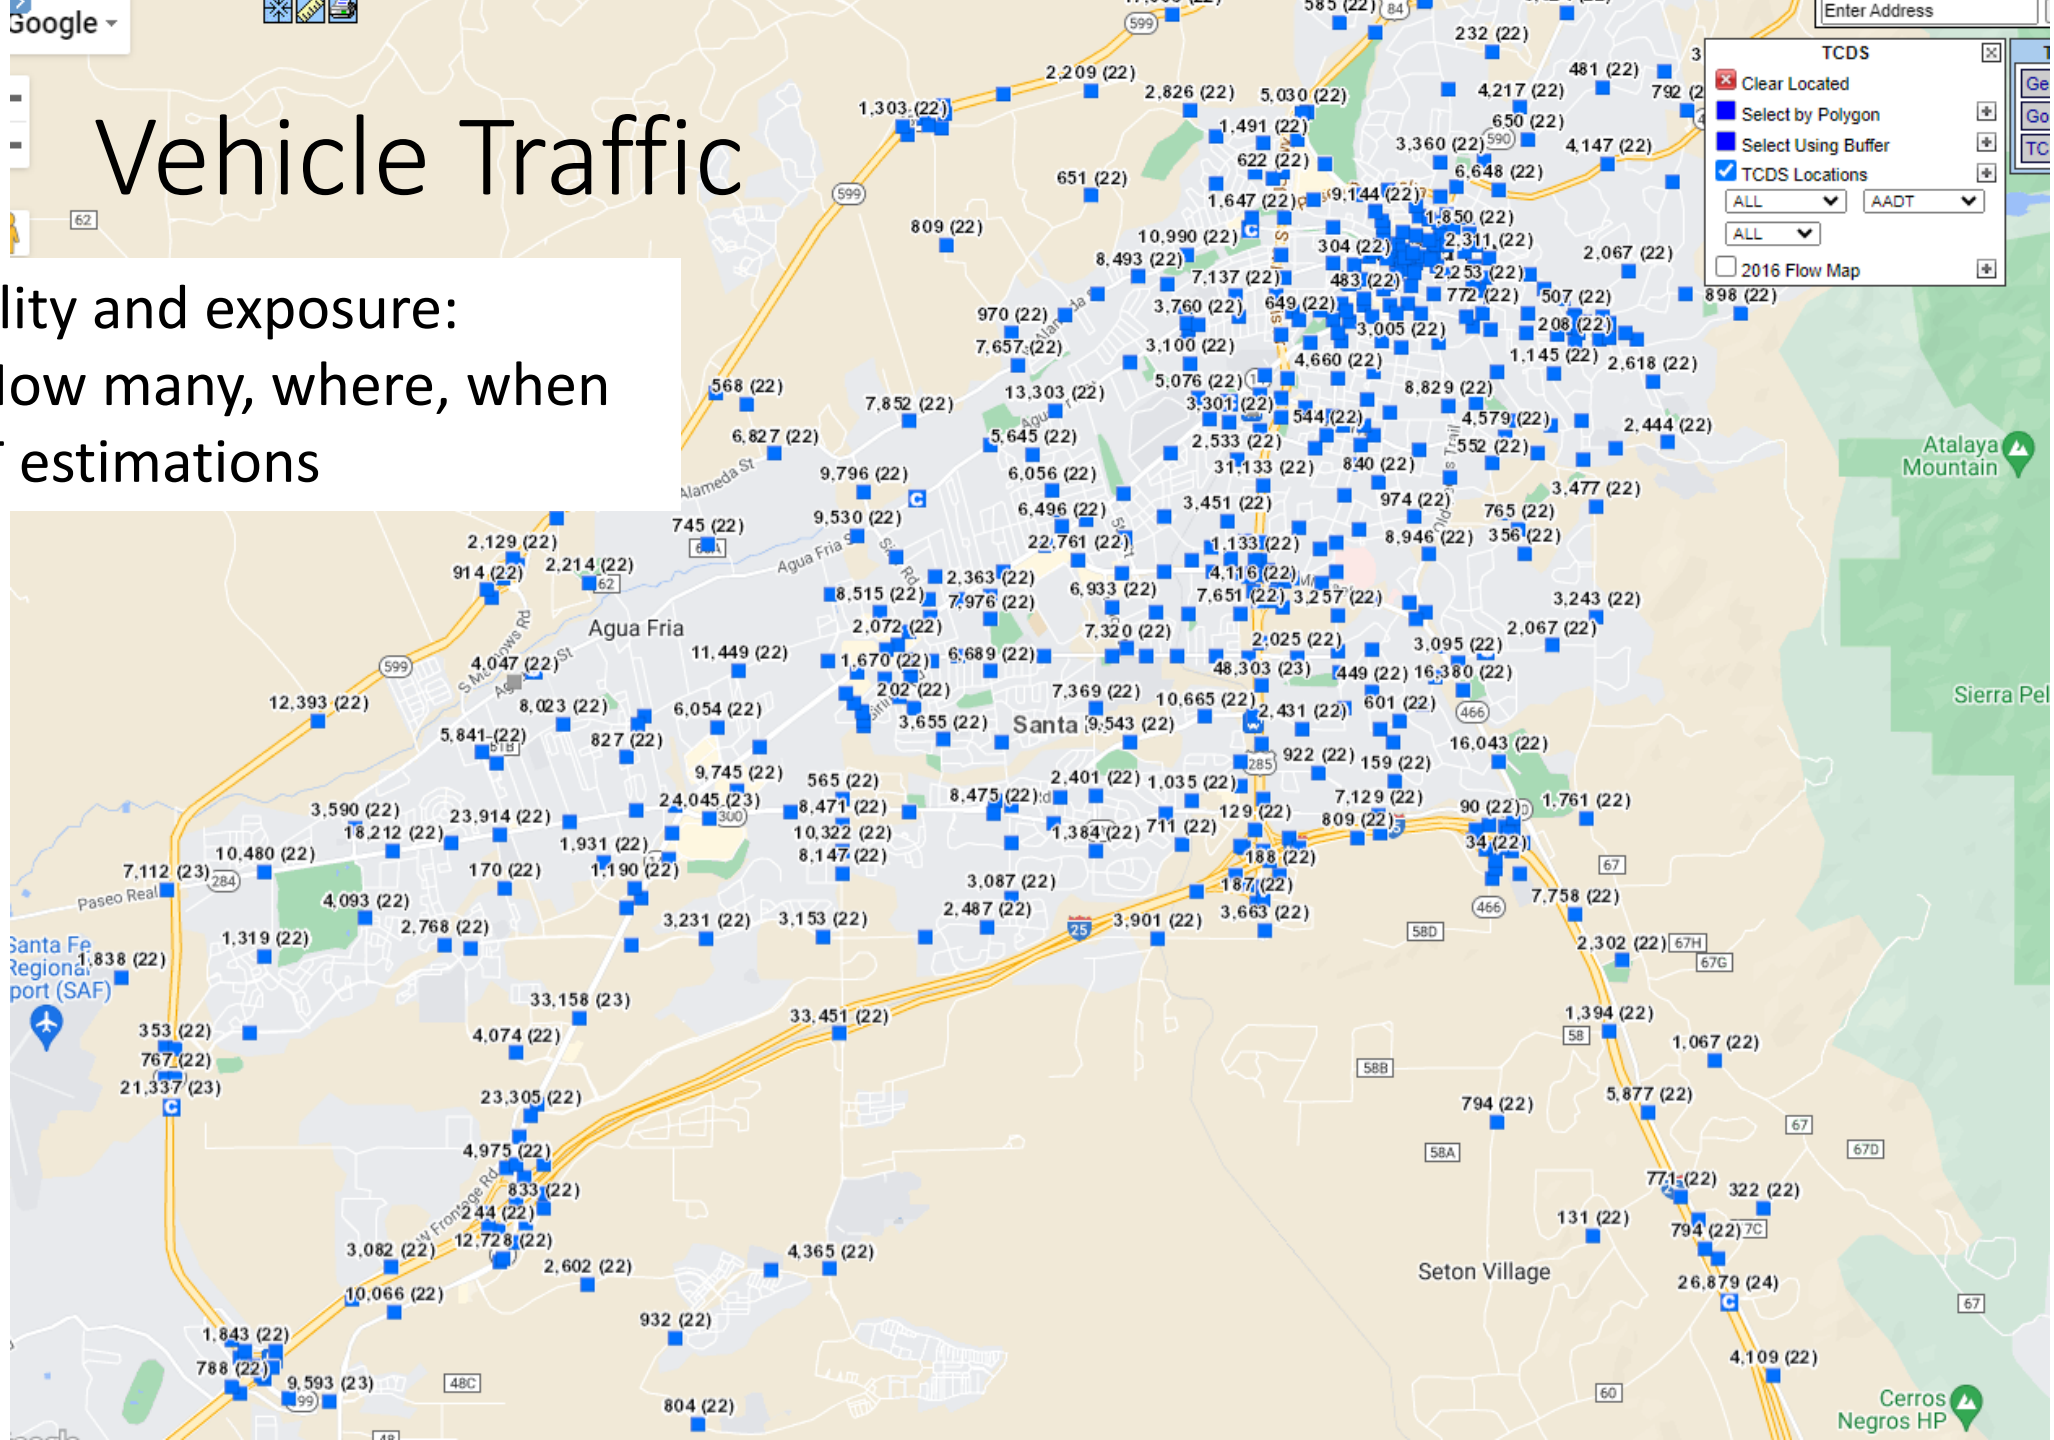

- A function of
 - Probability
 - AADT
 - Exposure
 - Human factors:
 - Speed
 - Vehicle type
 - Driver action and attention
 - Infrastructure
 - Design
 - Maintenance

Figure 2. Graphic. Safe System approach (Source: FHWA).

- Pedestrians - 77.4%

Because of similar cameras, we know that vulnerable user's

- mirror vehicle use in timing and location along Cerrillos.
 - Does not seem to be related to zoning or a number of other factors such as absolute distance to pedestrian generators such as schools and grocery stores
- Pedestrian/bike incidents follow pedestrian exposure
- Bicyclist use the sidewalk as much OR more while traveling on Cerrillos

The average risk of death for a pedestrian rises dramatically as speeds increase.

Source: AAA Foundation for Traffic Safety

Figure 3. Graphic. Relationship between pedestrian crash risk and speed (Source: GHSA and AAA).

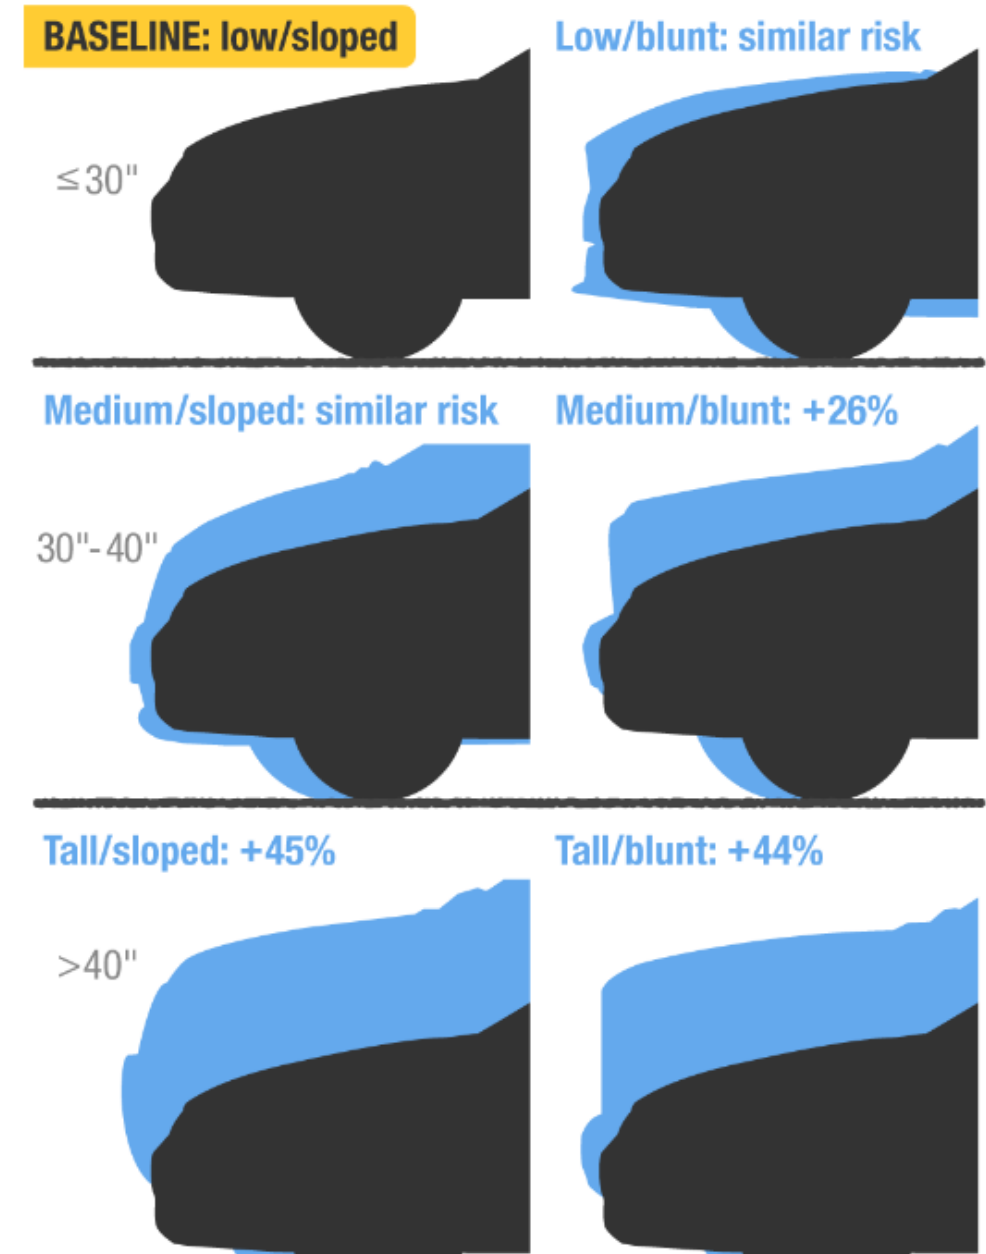

- Vehicle Type:

“Whatever their nose shape, pickups, SUVs and vans with a hood height greater than 40 inches are about 45 percent more likely to cause fatalities in **pedestrian** crashes than cars and other vehicles with a hood height of 30 inches or less and a sloping profile, an IIHS study of nearly 18,000 pedestrian crashes found. However, among vehicles with hood heights between 30 and 40 inches, a blunt, or more vertical, front end increases the risk to pedestrians.”

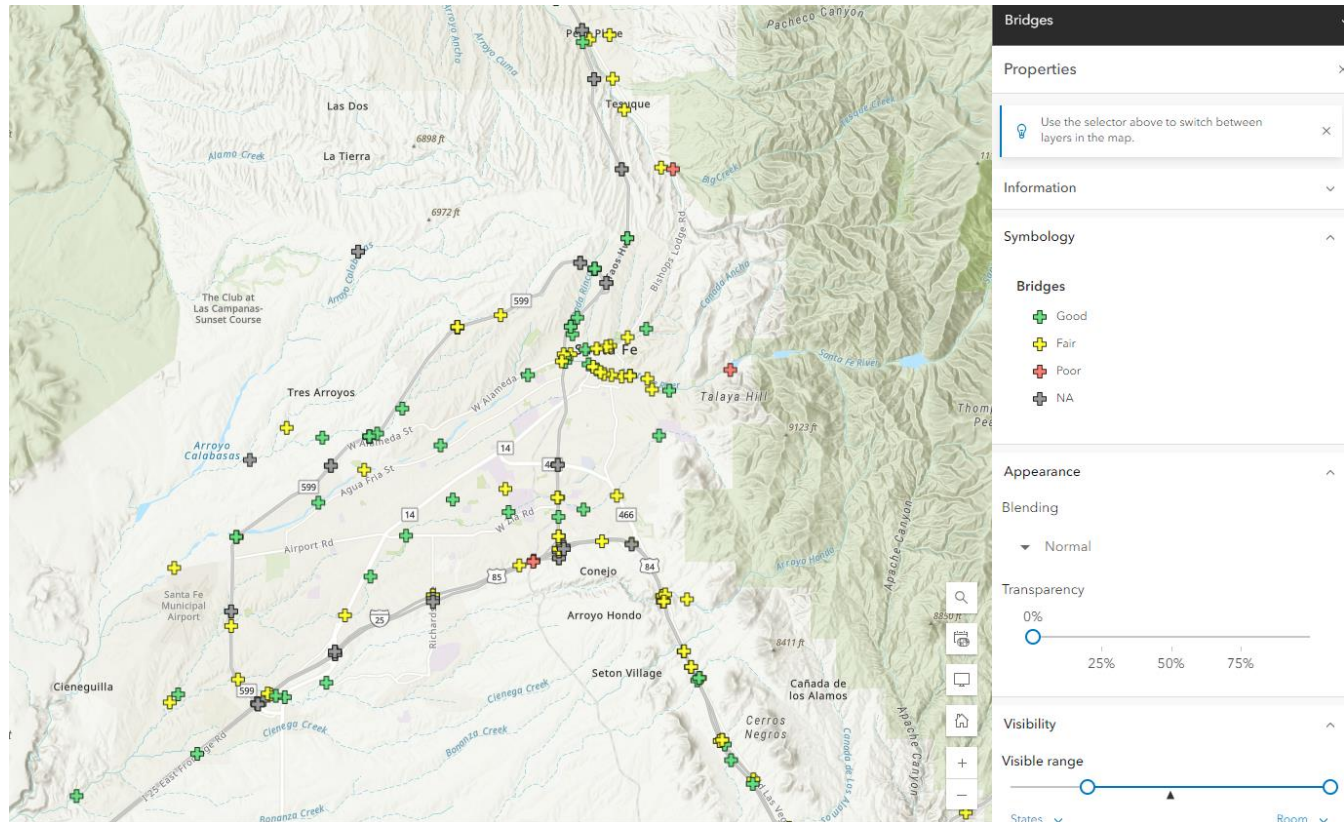

- **Insurance Institute for Highway Safety (IIHS)**

*Cerrillos Road from St. Michaels Drive to St. Francis Drive is not included as it is NMDOT's jurisdiction.

The “1,000 times” problem may actually be the primary reason why we can expect local governments to be resistant to adopting an approach like the Crash Analysis Studio as policy. If you truly acknowledge that a deadly crash is not a fact of life, but an anomaly that shouldn't have happened, and a condition that should be corrected, then you suddenly have a to-do list a thousand miles long.

[Okay, You Know How To Fix a Deadly Stroad. Now Do It 1,000 Times. \(strongtowns.org\)](http://strongtowns.org)

- There is a lot going on with data, but what is the direction in order to address socio-economic problems.

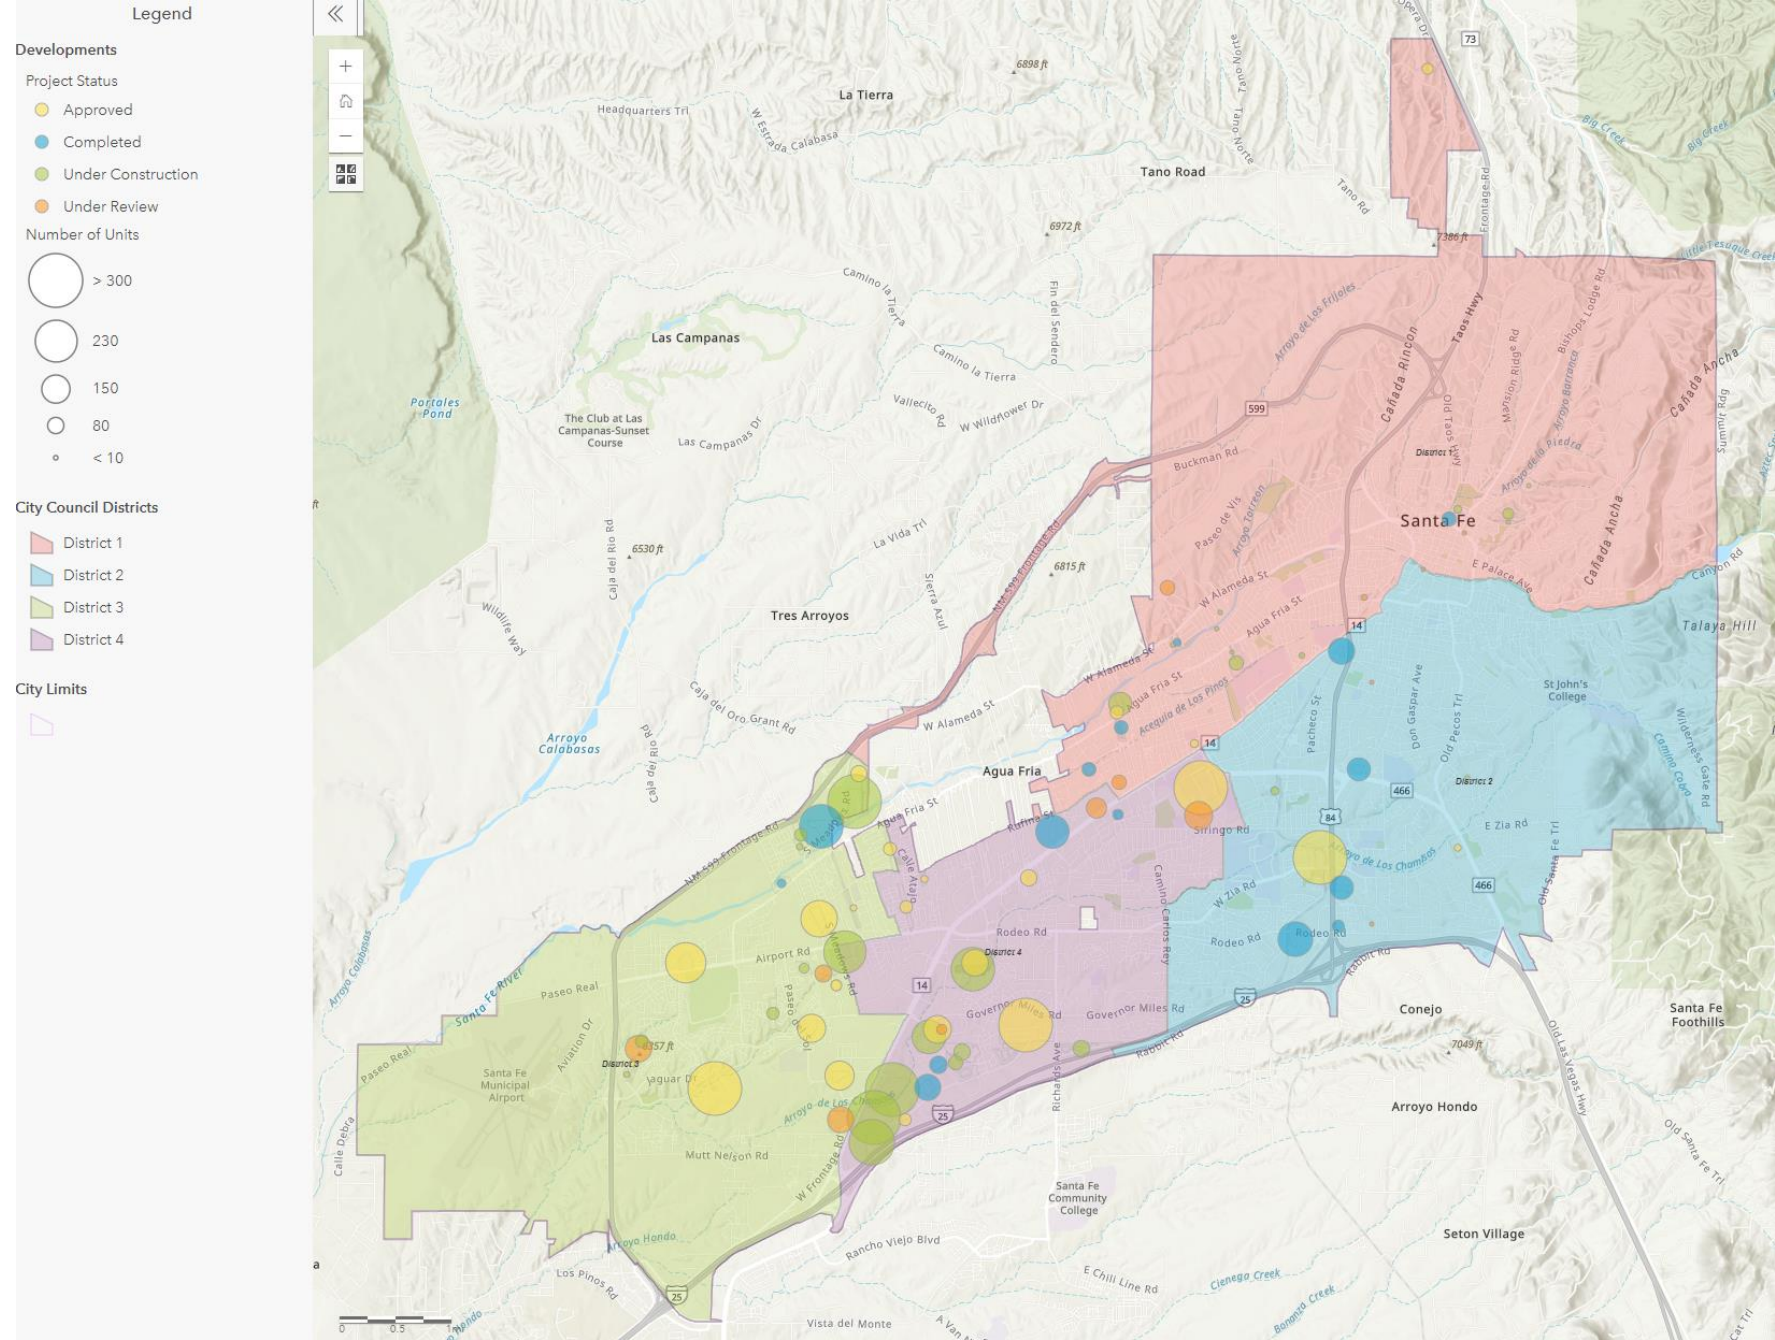

This is the Santa Fe Residential Pipeline map.

It shows the Number of development projects by the status of the work. One can zoom in to see details about each development and its approximated location.

But What if it also showed: the future transportation improvements expected to take place at each location?

What if the data associated with each TIA was accessible to 3rd Parties or to other developers in the area to understand/assess the compounding impacts in each area?

What if this was overlaid on top of the Future Road Network, The Transportation Master Plan, the Bike Master Plan, CIP, ICIP, TIP, other IPs

You could:

Better budget for infrastructure needs across the city

Identify where the most needs are

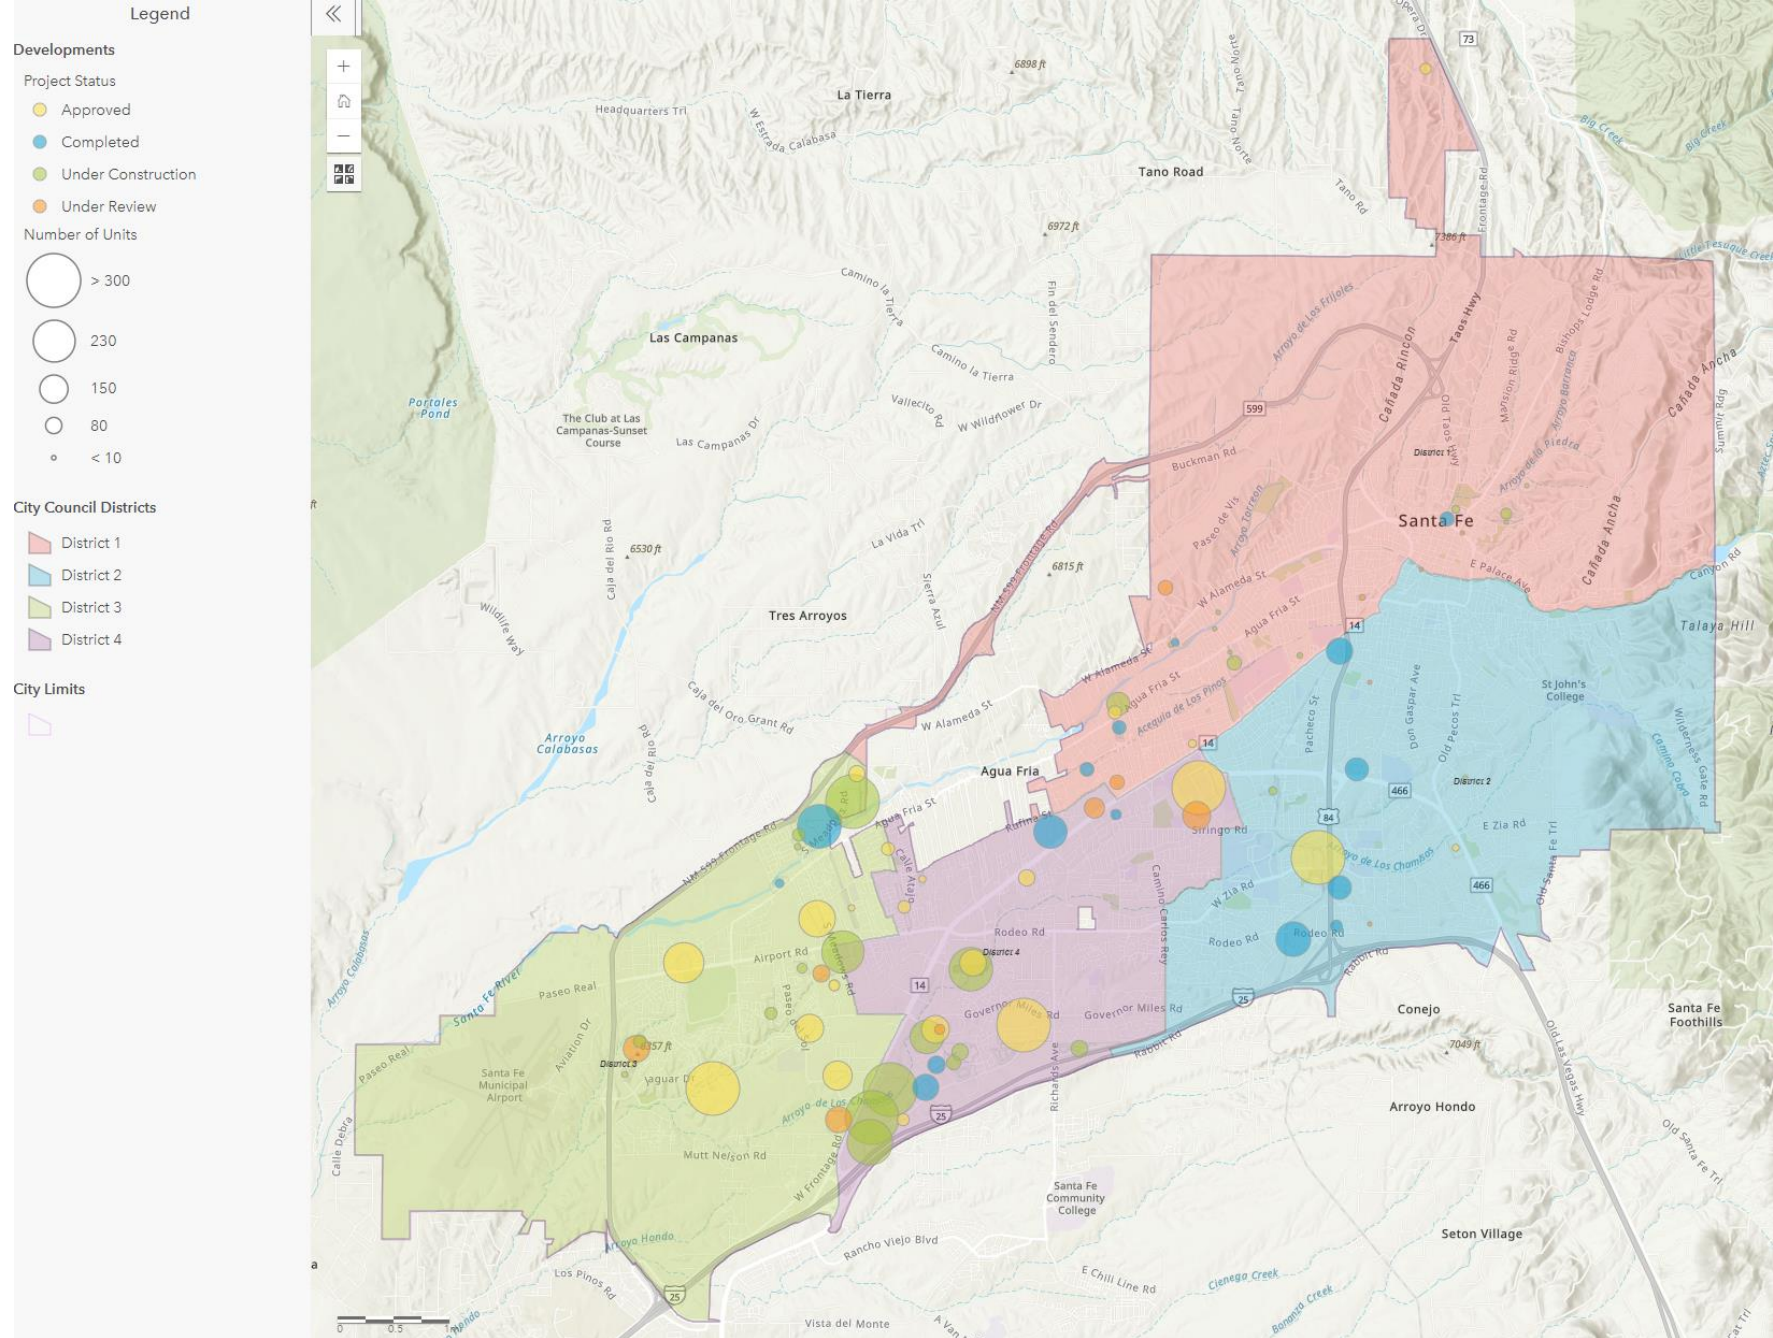

Identify where the most money has been spent

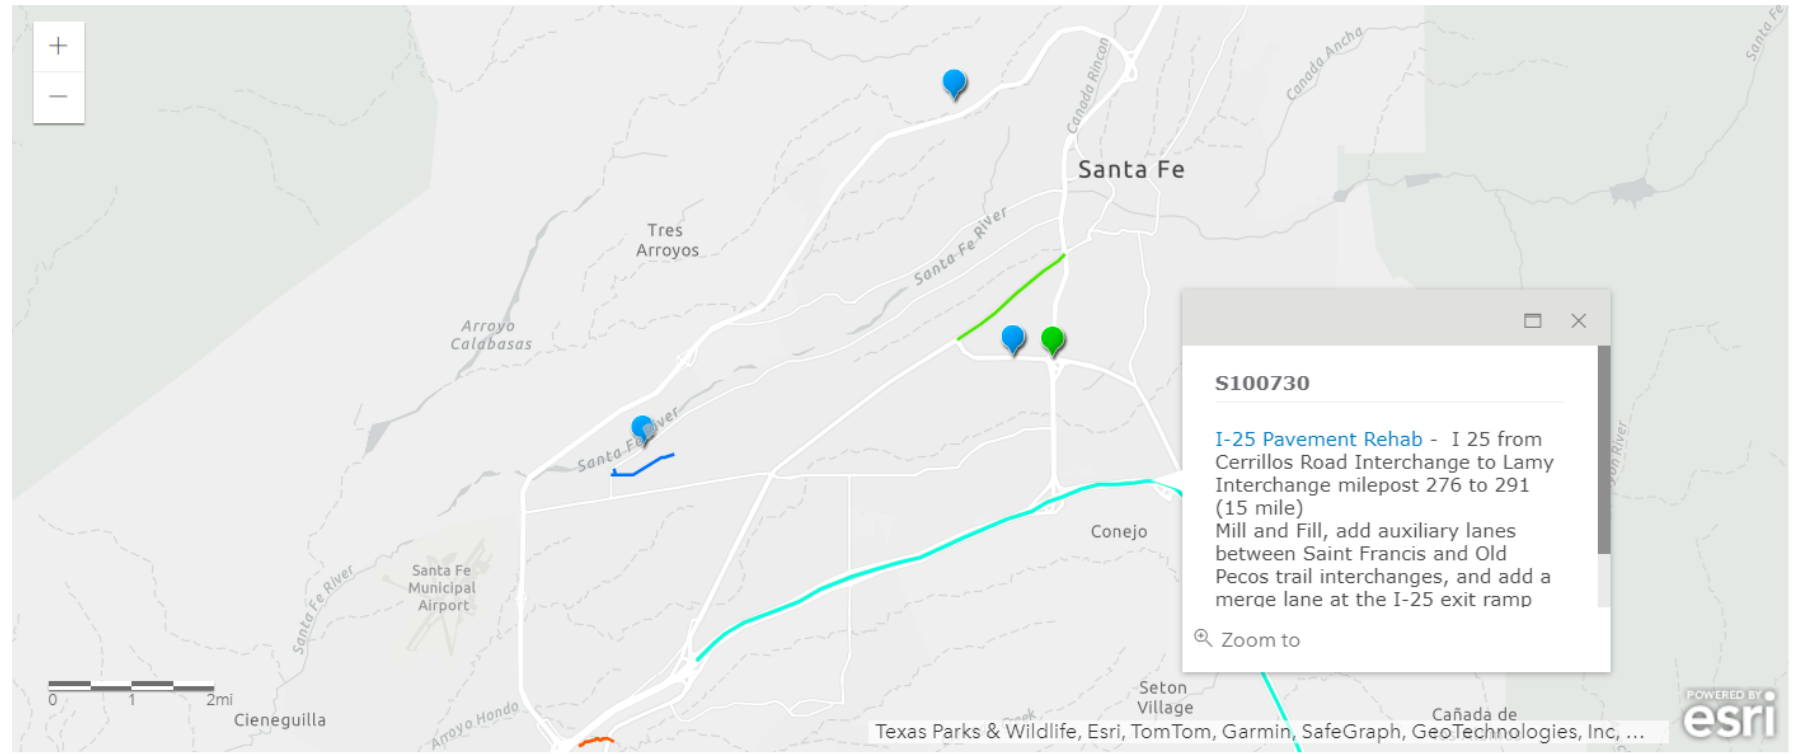

Sum the amount of private investment in an area vs public investment

Identify locations of imminent importance

Have better data to be more responsive to changing needs

Be more transparent.

- Click on any balloon or highlighted project in the above map to retrieve the NMDOT link for detailed information by project.
- Zoom in and out using the + and – icons in the top left of the map

TIP Amendments Awaiting
Approval/Draft TIP

Final Thoughts

- The MPO has access to a wide variety of in-depth data. While holes in the datasets exist (missing robust pedestrian/bicyclist counts, missing infrastructure condition data on local roads, missing project expenditure tracking in the past) we have the data and understanding to apply for large grants/
- However, changes to policy are essential to curving trends in crash severity over the long-term.

Public Support

- Through Surveys and outreach

- The MTP 2015-2040 online survey received nearly 300 responses
- The MTP 2020-2045 online survey received nearly 670 responses

FIGURE 2-5. SURVEY RESPONSE: TRANSPORTATION BARRIERS

Santa Fe Neighborhood Street Safety Study

A neighborhood transportation safety pilot project

Do you avoid any locations because of street safety concerns?

Corridor	Comment
Cerrillos Rd	Absolutely. I avoid urban trails at night. I hate walking on St Francis Dr. (sorry, I know that's not part of the survey). I won't bike on Cerrillos or let my child bike on Cerrillos/St. Francis/St. Mike's. Cordova Road is a little nerve-wreaking for biking too.
	Absolutely. I cut through to safer routes on my bike to avoid bodily harm by vehicles. The sheer volume of traffic and bad driving I see regularly is enough to cause pause and seek very complicated routes to my destination. I avoid Cerrillos because it's a highway built through the middle of town. It's completely built for the driving experience with vehicles at the pinnacle of the hierarchy and preference. Walking and cycling should NOT be viewed as afterthought.
	Airport, cerrillos, rodeo, zia, st francis, zaferano... all are the absolute worst. I take extra time just to go through neighborhoods to avoid all main streets as much as possible
	Areas around Cerrillos road from Airport to St. Francis. Rodeo road from Airport to Zafarano.
	avoid Cerrillos as much as I can
